

$$z = \vec{w} \cdot \vec{x} + b$$

Sigmoid Function

$$g(z) = \frac{1}{1 + e^{-z}}$$

$$0 < g(z) < 1$$

ReLU (Rectified Linear Unit)

Most used
in Neural
networks

$$g(z) = \max(0, z)$$

$$g(z) = 0, \text{ if } z < 0$$

$$g(z) = z, \text{ if } z \geq 0$$

Linear Activation function

"No Activation Function"

$$a = g(z) = \underbrace{\vec{w} \cdot \vec{x} + b}_z$$
